

# Is your e-mail database so colossal that managing it has become a NIGHTMARE?

## Is your business in jeopardy because you can't find critical correspondence?

Up to 70% of your business' important information resides in e-mail! As reliance on e-mail continues to grow, the challenge of storing, protecting, managing, and accessing this essential resource will continue to increase.

- Are you prepared to meet legal discovery requests for e-mail?
- Are you complying with industry regulations such as SEC, Sarbanes-Oxley and NASD?
- Are you effectively addressing your e-mail storage and retrieval challenges?

## EEAS faces the challenge head-on!

We are Essential Data Services, a division of Infinity Network Solutions Inc. Our solution can help your business comply with legal and regulatory demands and improve e-mail storage management and end-user productivity, while keeping your data secure and accessible anytime from anywhere via the Internet.

## Essential provides secure, reliable access to your archived e-mail 24/7

We partner with IBM and TELUS Canada to provide small and medium sized businesses with the ultimate in e-mail archiving and management. IBM's DB2 CommonStore e-mail archiving software is installed on our secure servers located in the TELUS data centre, while the client software is installed on your e-mail server. At the time of installation, you decide on policies such as how old or how big an e-mail has to be, or how many attachments it has to have, before it will be archived. After that, you never have to think about e-mail archiving or e-mail space issues again!!

*As the number of paperless businesses increases, it is important that e-mail backup and retrieval solutions be implemented to manage all business e-mail.*

**An e-mail archiving solution isn't just critical, it's essential!**

## You can't afford not to have EEAS!

### — Simple Set-Up and Maintenance

EEAS integrates directly with your mail server. After the initial set-up which establishes policies for archiving, the e-mails are archived to a database automatically according to the policies. No maintenance of the system is necessary.

***No changes to your Exchange mail system!***

### — Higher Productivity and Efficiency

E-mails and attachments are archived and retrieved within seconds and still immediately available after several years. Search times are shortened so operations become more efficient.

***Our advanced search technology makes it easy to access the data you need, when you need it.***

### — No more PST files

EEAS eliminates the need to archive e-mails as .pst files on individual hard drives. These files can be very large and difficult to backup and search, and many users do not know how to handle them properly. Instead, EEAS stores e-mails off-site in an easily searchable database.

***Manage your e-mail storage growth without the headache of poorly organized, unwieldy .pst files.***

### — User-friendly

Seamless integration with existing e-mail desktop applications means your mail server users can use the archive system right away with little or no training.

***No learning curve - all archiving is done automatically and transparent to the user!***

### — Comply with government regulations

Several government acts such as Sarbanes-Oxley and HIPAA require that some companies retain sensitive information for a certain time period. E-mails can be kept indefinitely in the database, and the Records Enabler extensions that come with EEAS can convert e-mails to documents to be used to meet various regulatory requirements.

***Failure to produce records requested by a regulator or investigator can lead to fines and jail terms.***

### — Security

Data is stored in one of the most technologically advanced co-locations in North America. Totally secure and accessible 24/7, nothing can get to your data except you!

***On-site storage isn't safe!***

**It's essential to ensure compliance with e-mail archiving!**
